Worker Cut

The Fixera Worker Portal is a standalone web application built for home service professionals (plumbers, electricians, cleaners, painters) operating in Nairobi, Kenya. It connects seamlessly with the Fixera customer app through a shared Supabase database, enabling real-time job management.

Project Structure

Tech Stack

React 18	UI framework — component-based frontend
Vite 5	Build tool — fast dev server on port 5175
React Router DOM	Client-side routing between pages
Supabase	Backend — auth, PostgreSQL database, real-time
PDFKit	Used to generate this documentation file

Database Design

Supabase Database — Same Project as Customer App

workers

New table — stores professional profiles

id	UUID	Primary key — references auth.users
full_name	TEXT	Worker's full name
email	TEXT	Login email
phone	TEXT	M-Pesa phone number for payouts
service	TEXT	Plumbing / Electrical / Cleaning / Painting
status	TEXT	online / offline — updated in real-time
rating	NUMERIC	Default 5.0 — customer ratings
total_jobs	INTEGER	Incremented on job completion
earnings	NUMERIC	Gross earnings in KSh
created_at	TIMESTAMPTZ	Auto timestamp

bookings

Shared with customer app — both apps read and write

id	UUID	Booking identifier
user_id	UUID	Customer who made the booking
worker_id	UUID	Worker who accepted — NULL until accepted
worker_name	TEXT	Worker's name — set on acceptance
service	TEXT	Service category
status	TEXT	upcoming / confirmed / in_progress / completed / cancelled
address	TEXT	Job location
booking_date /	TEXT	Scheduled date and time

Row Level Security (RLS)

How the Apps Connect

Real-Time Data Flow Between Customer & Worker App

1

Customer Books

Customer selects service, picks date/time, confirms booking. Record saved to bookings table with status = "upcoming" and worker_id = NULL.

2

Worker Sees Job

Worker's Dashboard (New Jobs tab) queries bookings where worker_id IS NULL and service matches the worker's skill. Job appears in real-time.

3

Worker Accepts

Worker taps Accept. System writes worker_id, worker_name and updates status to "confirmed". The job moves from New Jobs to My Jobs.

4

Customer Notified

Customer's Booking History and confirmation page now show the worker's name and status "confirmed" — professional has been assigned.

5

Worker Updates Status

Worker progresses through steps: On My Way !' Arrived !' In Progress !' Completed. Each click updates the status field in bookings.

6

Job Complete

Status set to "completed". Worker's total_jobs increments, earnings updated. Customer sees completed status in their booking history.

Single Source of Truth

Both apps share one Supabase project (igncnngkbmswomphbhwa). The bookings table acts as the bridge — customers write to it and workers read/update it. No separate API needed.

Pages — Auth & Dashboard

1 Login Page (/login)

- › Worker-specific login — separate from the customer app login
- › Email + password fields with gold focus borders
- › Error message displayed on invalid credentials
- › Dark navy background with gold wrench icon branding
- › Link to Register page for new workers
- › On success !' redirected to /dashboard

2 Register Page (/register)

- › Fields: Full Name, Email, Phone (M-Pesa number), Password
- › Visual service picker grid: Plumbing / Electrical / Cleaning / Painting
- › Selected service highlighted with gold border
- › On submit: creates Supabase auth user then inserts into workers table
- › Confirmation screen shown after successful registration
- › Worker must confirm email before signing in

3 Dashboard Page (/dashboard)

- › Stats row: Total Jobs completed, Total Earnings (KSh), Current Rating
- › Greeting changes with time of day: Good Morning / Afternoon / Evening
- › Tab 1 — New Jobs: unassigned bookings matching worker's service type
- › Tab 2 — My Jobs: all bookings where worker_id = current worker
- › Job cards show: service, address, date, time, customer notes
- › Accept button on New Jobs tab — one tap claims the job
- › Refresh button to manually reload the job list
- › Click any card to go to full Job Detail page

Pages — Job Detail & Active Job

4 Job Detail Page (/job/:id)

- › Full job information: service type, address, date, time, payment, notes
- › Status banner colour-coded: Gold=upcoming, Blue=confirmed, Green=in_progress, Red=cancelled
- › Google Maps link — opens navigation to customer address
- › Accept Job button — shown for unassigned jobs
- › Start Job button — shown when status is confirmed (changes to in_progress)
- › View Active Job button — shown when job is already in progress
- › Cancel Job button — available for confirmed or in-progress jobs
- › Buttons shown/hidden dynamically based on current job status

5 Active Job Page (/active/:id)

- › Visual 5-step progress tracker with icons and connecting lines
- › Step 1: Job Accepted | Step 2: On My Way | Step 3: Arrived
- › Step 4: Job In Progress | Step 5: Job Complete
- › Completed steps shown in green with checkmark
- › Current step highlighted with gold ring and description
- › One large action button advances to the next step
- › Navigate to Customer button opens Google Maps
- › On completion: total_jobs +1, earnings +1500 KSh written to workers table
- › Completion celebration screen with green success card

PROGRESS STEPS

Accepted

On My Way

Arrived

In Progress

Complete

Pages — History, Earnings & Profile

6 History Page (/history)

- › Summary cards: Jobs Completed count and Jobs Cancelled count
- › Filter buttons: All / Completed / Cancelled
- › Job list with colour-coded status badges
- › Each row shows service, address, date/time
- › Click any job card to navigate to Job Detail

7 Earnings Page (/earnings)

- › Hero card: Total Earnings in KSh (large prominent display)
- › Period breakdown: This Week earnings and This Month earnings
- › M-Pesa Payout section: method, registered phone, payout schedule (every Friday)
- › Commission breakdown: Fixera takes 15%, worker keeps 85%
- › Recent payments list — last 10 completed jobs at KSh 1,275 each (after fee)

8 Profile Page (/profile)

- › Avatar displays service emoji: Plumbing=🔧, Electrical=⚡, Cleaning=🧹, Painting=🎨
- › Stats row: Jobs done, Star rating, Total earned (85% of gross)
- › Edit Profile form: update Full Name and Phone number
- › Changes saved directly to Supabase workers table
- › Light / Dark mode toggle — same auto day/night system as customer app
- › Log Out button — clears Supabase session and redirects to /login
- › App version: Fixera Worker App v1.0.0

Sidebar Navigation (Layout Component)

🔧 Branding	Wrench icon + "FIXERA / WORKER APP" label at top
👤 Worker Card	Avatar, name, service and online/offline toggle
📋 Jobs	Dashboard — job feed
🔄 Active	Active job progress tracker
📅 History	Past jobs
💰 Earnings	Money dashboard
👤 Profile	Settings page
☰ Collapse	Sidebar collapses to icon-only mode (72px wide)
🔄 Online Toggle	Syncs worker status to Supabase in real-time

Design System & Setup Guide

Colour Palette

Gold Primary
#C9A020

Gold Light
#D4B033

Theme System

- Dark mode is default — CSS variables in :root (navy backgrounds, light text)
- Light mode applied via `html.light-mode` class (white backgrounds, dark text)
- Auto-switch: Light mode 6am–6pm, Dark mode 6pm–6am (useTheme hook)
- Manual toggle available on Profile page with animated switch

Supabase Setup SQL

-- Run this in Supabase SQL Editor

```
CREATE TABLE IF NOT EXISTS workers (  
  id      UUID PRIMARY KEY REFERENCES auth.users(id) ON DELETE CASCADE,  
  full_name TEXT,  
  email   TEXT,  
  phone   TEXT,  
  service TEXT,  
  status  TEXT DEFAULT 'offline',  
  rating  NUMERIC DEFAULT 5.0,  
  total_jobs INTEGER DEFAULT 0,  
  earnings NUMERIC DEFAULT 0,  
  created_at TIMESTAMPTZ DEFAULT NOW()  
);
```

```
ALTER TABLE workers ENABLE ROW LEVEL SECURITY;
```

```
CREATE POLICY "Workers manage own profile"  
ON workers FOR ALL USING (auth.uid() = id);
```

```
CREATE POLICY "Bookings visible to workers"  
ON bookings FOR SELECT USING (true);
```

```
CREATE POLICY "Workers update bookings"  
ON bookings FOR UPDATE USING (true);
```

1. Run the SQL above in Supabase SQL Editor
2. Open a terminal `! cd C:\fixera-worker ! npm run dev`
3. Open `http://localhost:5175` in your browser
